SUMMARY

Senior Full-Stack Engineer with **4.5+ years** designing and scaling enterprise analytics platforms used by **1,000+ clients**. At GfK-NIQ, led high-impact engineering initiatives across platform architecture, performance optimization, security, and post-merger migration. Cut deployment cycles from **2 weeks to 4 days** and consolidated **5,000+ client accounts** with zero data loss. Proven track record of owning engineering initiatives from design through delivery and improving reliability, performance, and product capabilities.

SKILLS

Languages: Java (11/17/21), SQL, TypeScript, JavaScript (ES6+)

Backend & Frameworks: Spring Boot, Spring Cloud, Spring Security, Spring Data JPA, Resilience4j, Node.js, Express, REST APIs, Auth0

Distributed Systems & Messaging: Apache Kafka (Consumer Groups, DLQ, Idempotent Consumers), Redis (Cache-Aside), Microservices, Multithreading, Low-Latency APIs

Databases & Data: PostgreSQL, MySQL, MongoDB, Flyway, HikariCP, Query Optimization, Database Indexing

Testing & Quality: JUnit 5, Mockito, Testcontainers, SonarQube, Jest, Jasmine, Karma, Integration Testing

Cloud, DevOps & Observability: Docker, Kubernetes, Helm Charts, Flux, Prometheus, Grafana, Micrometer, AWS, GCP, Azure, GitLab CI/CD, Jenkins

Frontend: ReactJS, Redux, Angular, Tailwind CSS, HTML5, CSS3, SSR

EXPERIENCE

GfK - An NIQ Company June 2024 - Present

Software Engineer (SDE-2) Pune, India

- **API Design & Ownership**: Led design and delivery of high-throughput **Spring Boot REST microservices** and **ReactJS frontends** serving **1,000+ enterprise clients**; directly contributing to a **15% revenue uplift** through upsell feature delivery.
- **Event-Driven Architecture**: Built asynchronous event-streaming pipelines using **Apache Kafka** with custom consumer groups, idempotent consumers, and Dead-Letter Queues (DLQ) to reliably process real-time analytics events.
- **Resilient Distributed Systems**: Integrated **Resilience4j** circuit breakers and rate limiting across microservices to improve fault tolerance and service resilience.
- **Performance & Data Optimization**: Optimized **PostgreSQL queries and database indexing** and introduced a **Redis cache-aside** layer, reducing end-to-end data latency by **29%** (227ms to 161ms) and platform load times by **25%**.
- **Security & IAM**: Architected secret management and token rotation using **HashiCorp Vault**; integrated **Auth0** with Spring Security and Node.js middleware for GDPR/SOC2 compliance, reducing authentication failures by **30%**.
- **Platform Consolidation & Migration**: Designed **Spring Boot data-mapping services** and **Node.js migration scripts** to consolidate **5,000+ NIQ client accounts** into a unified post-merger ecosystem with **zero data loss**.
- **Observability & CI/CD**: Established centralized telemetry using **Prometheus, Grafana, and Micrometer** to monitor JVM metrics, improving uptime from **98.7% to 99.1%**; streamlined **GitLab CI/CD and Helm** deployments to cut cycle times from **2 weeks to 4 days**.

NielsenIQ (NIQ) July 2022 - June 2024

Software Engineer (SDE-1) Pune, India

- **Enterprise Analytics Platform**: Designed scalable, low-latency **Java/Spring Boot microservices** and **ReactJS frontends** enabling dataset creation for **200+ enterprise clients** across the US and EU; leveraged **CompletableFuture** for parallel upstream data aggregation.
- **High-Throughput Data Pipelines**: Engineered **Spring REST APIs** and Azure event connectors for real-time ingestion; fine-tuned **HikariCP connection pools** and database indexing to improve backend throughput by **30%**, supporting **millions of daily data events**.
- **Access Control & Admin UI**: Owned design of Spring Boot **RBAC APIs** and ReactJS Admin dashboard used by **1,500+ users**; established access-policy standards adopted across **3 product teams**.
- **Database Migrations & Quality**: Implemented **Flyway** schema migrations and increased backend test coverage from **40% to 90%** using **JUnit 5, Mockito, and Testcontainers**; introduced SonarQube quality gates that prevented **3+ critical defects** from reaching production.
- **UI Modernization & Automation**: Led migration from Material-UI to the NIQ Design System and built a **Node.js** scripting pipeline for automated token transformation, cutting UI overhead by **20%** and standardizing theming across **4+ applications**.

Gemini Solutions Sept 2021 - June 2022

Technical Trainee Gurugram, India

- **Financial Platform**: Built Angular frontend and Node.js APIs for a financial advisory platform; achieved **80% WCAG 2.1 accessibility compliance** across **1,200+ users**.
- **API Integration**: Developed Node.js/Express REST APIs on AWS connecting frontend workflows with third-party financial services using asynchronous middleware and structured error handling.
- **Employee Recognition System**: Delivered full-stack Angular and Node.js application for **800+ users**; boosted engagement by **20%** and raised Lighthouse performance score from **60 to 80**.
- **Component Library**: Designed reusable Angular component library backed by a Node.js service layer, reducing development time across **3+ product workflows**.

EDUCATION

Vellore Institute Of Technology Vellore, India

Master of Computer Applications; CGPA: 9.25 / 10 2020 - 2022

IMED, Bharati Vidyapeeth Pune, India

Bachelor of Computer Applications; CGPA: 8.85 / 10 2017 - 2020

PROJECTS

MovieBox | *ReactJS, Tailwind CSS, Gemini AI, TMDB API, Jest, Netlify*

- Architected an AI-powered movie discovery platform integrating **Gemini AI** for personalised recommendations and **TMDB API** for real-time metadata; built with component-driven React architecture, lazy loading, code-splitting, and Netlify CI/CD.

Reet Sangeet | *ReactJS, Tailwind CSS, Node.js, MongoDB, Vercel*

- Freelance end-to-end build for a music school delivering a React SPA with **Node.js/Express** backend and **MongoDB**; integrated WhatsApp Business API for automated booking enquiries, reducing manual follow-ups for the client.
- Implemented SEO best practices and **SSR-ready** routing; live in production serving real users with **zero downtime** since launch.
